

Shopify Integration

This document explains our Shopify integration process and how it works with the Storeship Control Panel.

Before integrating we require a few checks to be made with your Shopify store to make sure it works correctly with our system.

- 1) Please ensure all products on your Shopify store have a unique SKU, our system uses the sku field as a link between your store and our software.
- 2) If your products are barcoded please ensure you have the barcode field filled in on Shopify.
- 3) Please ensure the only orders you have unfulfilled on Shopify are ones you require us to fulfil, our system will import all paid for and unfulfilled orders.
- 4) Please do not change any SKU's or order number's on Shopify once system is linked, it will cause problems with the Shopify to our system communications.

Once the above criteria has been met you can link to our system as follows:

Log into your account on the Storeship Control Panel:

<https://www.storeship.co.uk/manage>

Once logged in please go to the following page and follow instructions:

<http://www.storeship.co.uk/manage/shopify-install.php>

This will generate a token to our system so we can communicate with your store.

Once above is completed contact us to finalise installation and test..
